Memo to File:

RE: Sunshine Mining Company
Burgin Project
ACT/049/009
Utah County, Utah

On March 31, 1982, Division personnel Susan Linner and Tom Portle visited the above-mentioned minesite. The purpose of the visit was to provide technical assistance to the mine with regard to establishing test plots. These test plots are to be established pursuant to a variance request regarding Rule M-10(12). Mr. Carl Johnson represented Sunshine Mining Company. Various sites were chosen for test plots at this time. Generally, these sites were in level areas and would not be likely to be affected by traffic incident to mining. Three cultural treatments would be utilized in each of these three areas. The first area represented--acid waste rock, the second area--neutral waste rock, and the third area--topsoil storage. All required materials have been procured by Mr. Carl Johnson and were stored at the minesite awaiting plot staking and material distribution.
